

Download Akira Class Technical Manual

According to a size chart of Alex Jaeger, the Akira-class would be roughly 500 meters (1640.4 ft) in length. Studio model Edit. See: Akira-class model; Technical Manual Edit. The following information of specifications and defenses comes exclusively from the Star Trek: Deep Space Nine Technical Manual: The Star Trek: Deep Space Nine Technical Manual stated that this class had two torpedo launchers, although all other references that cover Akira-class weaponry agree that there are 15 tubes. It could be theorized that the contradiction is caused by a comparison of launcher machinery to actual launch points, but no further data regarding this ...Further, the addition of another photon launcher after the initial class launching was also my idea, in an effort to distinguish between the published specifications for the Akira Class in the DS9 Tech Manual and what we've see on screen. Akira Class Technical Manual The three sets were of the Sovereign and Akira Class starships as well as the If you see a Technical Manual among the list seen [HERE](#) or [HERE](#) that you. The film favorite ship, the Akira Class comes to life and is now a part of the Star Trek Starships. The Akira-class was a class of Federation starship that was
