

Download Aortic Arch Surgery Continuing Education In Cardiovascular Nursing

INTRODUCTION. Mortality remains high for patients who experience rupture of an abdominal aortic aneurysm (AAA), but it has dropped considerably in the past 20 years due to a variety of factors []. Elective AAA repair prior to the development of symptoms is the most effective means to prevent rupture and aneurysm-related sudden death. Aortic Aneurysm Repair (Ascending Aorta) When is surgical repair of an aortic aneurysm advisable? How is repair of an aortic aneurysm accomplished? Use this page to view details for the decision Memo for Transcatheter Aortic Valve Replacement (TAVR) (CAG-00430N). Valvular heart disease affects patients of all ages, with the highest incidence in patients older than 75 years. The nurse practitioner, whether in the primary or acute care setting, plays a vital role in the detection, monitoring, and shared decisions in treatment options. Assessment skills in conjunction with appropriate testing can identify patients early in the trajectory of the disease.
