The term anti - rheumatic can be used in similar contexts, but without making a claim about an effect on the course. Other terms that have historically been used to refer to the same group of drugs are remission-inducing drugs and slow acting anti-rheumatic drugs. In chronically affected joints, the normally thin synovium proliferates, thickens, and develops many villous folds. The synovial lining cells produce various materials, including collagenase and stromelysin, which contribute to cartilage destruction, and IL-1 and TNF-alpha, which stimulate cartilage destruction, osteoclast-mediated bone absorption, synovial inflammation, and prostaglandins ...
